

Building a strong foundation is key to success in any aspect of business, and this rings especially true when it comes to your software hosting platform. OneLaw Cloud allows your firm to modernise with a flexible, secure environment to store all of your OneLaw data. Hosted in Microsoft Azure, our Cloud platform is robust and effective, removing the capital cost and risk of an on-premise server. It's the way of the future.

## ABOUT OUR CLOUD PLATFORM

- + Our cloud platform is optional- you can host OneLaw software in the cloud or on-premise
- + OneLaw Cloud is designed to host all of your OneLaw-related data as part of a wider environment. Your IT team is responsible for your remaining applications and documents (such as storage for firm HR documents, support for your Microsoft Applications etc)
- + OneLaw Cloud is hosted by Microsoft Azure's datacentre in Sydney (and will likely be moved to New Zealand when the Auckland datacentre is built)
- + We have done extensive security work, and allowed for two-factor authentication, to ensure your valuable data is safe
- + We have kept our familiar OnePractice Desktop application, so there is no learning curve for existing customers to move onto OneLaw Cloud
- + We have an extensive backup regime for your data (detailed in this document)
- + Data in our platform is compartmentalised, meaning you can easily import and export your data as you wish (and it is kept separately from other firms')
- + We work with your IT team to set up the Cloud environment in a way that will work well for your firm
- + Our cloud environment is extensible- meaning it will suit your firm no matter if you are a sole practitioner, or a much larger organisation
- + The extensible platform means your firm can grow without massive infrastructure cost for cloud storage
- + Cloud allows your team to work easily from anywhere in the world- as long as they have their PC with the OneLaw app installed, and a good internet connection

### KEY BENEFITS

- + Your valuable data and documents are stored securely in your firm’s own Cloud instance
- + As part of a OneLaw Cloud subscription, you have access to technical support when you need it
- + We store multiple copies of your documents in multiple data centres for extra security
- + Multi Factor Authentication (MFA) ensures your access to OneLaw is secure, based off an additional form of identification unique to you, i.e. a mobile device
- + The additional OneLaw Cloud subscription costs significantly less than purchasing your own server and/or licensing SQL server for your firm
- + There are no additional overheads to access OneLaw- all you need is your PC and a secure internet connection
- + Communication between your PC and Cloud instance is encrypted using HTTPS, ensuring your information is safe

### BACKUPS

- + The practice management database is continuously backed up, and can be restored to any point in time over the past 35 days
- + We create a weekly backup for the past 52 weeks, stored in long-term retention
- + Documents have three daily snapshot backups taken, two during the day and one at night

### MIGRATION PROCESS

- + Whether you are a new or existing firm, migrating to the cloud is easy
- + We will work with you and your IT team
- + Migration for existing OneLaw firms is done after-hours to avoid disruption
- + Migration for firms that are new to OneLaw usually requires at most just one day of catch-up processing - talk to us about your options
